Addendum: The Variance of Information Loss as a Characteristic Quantity of Dynamical Chaos[1]

F. Schlögl

After publication the author became aware that in an article by J. S. Nicolis, G. Meyer-Kress, and G. Haubs [Non-uniform chaotic dynamics with Implication to information processing, *Z. Naturforsch.* **38a**:1157–1169 (1983)] the variance of information loss was introduced and was called the "nonuniformity factor." Numerical results for this quantity can also be found there.
