## Resolution of optical isomers of 4-amino-*p*-chlorobutyric acid lactam by co-crystallization†

Mino R. Caira,<sup>(1)</sup> Luigi R. Nassimbeni,<sup>(1)</sup> Janet L. Scott,<sup>(1)\*</sup> and Alexander F. Wildervanck

While inspecting the proofs of the above article, the authors noticed that they had inadvertently inverted the coordinates of the complex **2**. As this is a chiral structure it has been necessary to correct this. Herewith are the corrected versions of Table 3, and Figs. 3–5.

Table 3. Final fractional coordinates for **2** ( $\times 10^4$ )

	<i>x</i>	<i>y</i>	<i>z</i>	<i>U</i> (eq)

† This article appeared in the *Journal of Chemical Crystallography*, Vol. 26, No. 2, pp. 117–122.

Fig. 3. ORTEP diagram of the complex 2 showing thermal ellipsoids at 30% probability. Primary hydrogen bonding interactions are indicated as dashed lines.

Fig. 4. Packing diagram of the complex 2 viewed as a projection down [100]. Nitrogen atoms are presented as filled circles and chlorine atoms as dotted circles. Hydrogen bonding interactions are indicated by dashed lines.

Fig. 5. Stereodiagram showing hydrogen bonding interactions in the 2 complex. Only hydrogen atoms involved in hydrogen bonding interactions are included and the *p*-Cl-phenyl moiety of the lactam molecule is omitted for clarity.
