Erratum to: This complements the above paper in Appl Microbiol Biotechnol, volume 100 on page 3705
DOI 10.1007/s00253-016-7295-0

In the original version of this article inadvertently there is a lack of the information concerning the annealing temperature used for primers designed for conventional PCR.

It should be written:

For the primers designed for conventional PCR, among the tested annealing temperatures, 59°C for primers Psm1-6F and Psm1-6R (for detection of *Psm1* strains) and 54°C for primers Psm2-8F and Psm2-8R (for detection of *Psm2* strains) were selected as the optimal ones.

The online version of the original article can be found at doi:10.1007/s00253-016-7295-0.
