Robinson EJH, Richardson TO, Feinerman O, Sendova-Franks AB, Franks NR (2009) Radio tagging reveals the roles of corpulence, experience and social information in ant decision making.

We regret that the RFID microtransponder dimensions and weight were given incorrectly in the second paragraph of the materials and methods section.

This should read: The microtransponders measured $500 \times 500 \times 120 \mu\text{m}$ and had a mean weight of $89 \mu\text{g}$ ($\text{SD}=0.01$) including the weight of the glue.
