The original publication of the article reported polarized FTIR spectra taken on oriented superhydrous phase B crystals. Unfortunately, the authors mixed up the crystallographic *c*- and *a*-axes during their measurement. The atomic coordinates for hydrogen H2 should be $x = 0.45$; $y = 0.18$; $z = 0.27$. Thus, spectra in Fig. 10a are taken on the (001) plane with *E* parallel *b* (0°) and spectra in Fig. 10b are taken on the (010) plane with *E* parallel *c* (0°).
