**Erratum to: Polar Biol (2013) 36:895–906**  
**DOI 10.1007/s00300-013-1315-7**

In the original paper the labels of the abscissae of the plots shown in Fig. 6 (running years) were erroneously displaced. Here the corrected Fig. 6 is provided. The one-year shift in the year labels does not affect the general conclusions of the paper.

**Fig. 6** Mean sea-ice concentration for a region of the Larsen A (**a**) and Larsen B (**b**) embayments. Mean values appear as *open circles*, while the *line* represents a 7-day moving average. A threshold of 15 % sea-ice concentration generally indicates open-water conditions. Areas of analysis are depicted in Fig. 1
