**Erratum to: *Pediatr Nephrol***  
**DOI 10.1007/s00467-017-3610-y**

In the abstract of this article, the number of C4d-negative patients was incorrectly given as 10 and the number of C4d-positive patients as 37. The third sentence of the Results paragraph of the abstract should correctly have read: “Compared with C4d-negative patients ( $n = 37$ ), C4d-positive patients ( $n = 10$ ) presented higher baseline proteinuria ( $1.66 \pm 0.68$  vs  $0.47$

$\pm 0.19$  g/day/1.73 m<sup>2</sup>,  $p < 0.001$ ), a progressive decline in eGFR ( $-10.04 \pm 19.38$  vs  $1.70 \pm 18.51$  ml/min/1.73 m<sup>2</sup>/year;  $p = 0.045$ ), and more frequently achieved the primary outcome (50.0 vs 10.8%,  $p = 0.013$ ), and ESRD (30.0 vs 2.7%,  $p = 0.026$ )”.

This mistake was not repeated elsewhere in the article, and the results are all correct as given.

The authors regret this error and any inconvenience caused.
