This book on the regional anesthetics will interest all the doctors and more specifically the anesthetist. The various blocks are described soigneusement using a rich iconography using of the anatomical cuts, the echographic sights and the cutaneous reference marks. Each chapter is built in the same way making it possible to the reader to easily locate itself and of thus being able to progress easily.

This book describes chapter after chapter the many blocks of the upper limbs and lower but also the particular techniques in the children.

The final chapter relates to the characteristics of the peripheral blocks, the principles general, indications and against indications.

A very practical book is easy to use. It is supplemented besides by an access Internet giving access to videos and a complementary iconography.

**Compliance with ethical standards**

**Conflict of interest** None.
