To whom it may concern:

We thank Josef Finsterer et al. for their “Letter to the Editor” in response to our review article, “Neuroradiologic Manifestations of COVID-19: What the Emergency Radiologist Needs to Know” [1].

Although our review articles emphasized the most common neuroradiologic manifestations of COVID-19 that we would expect an emergency radiologist to encounter, we appreciate Josef Finsterer et al.’s effort to highlight the less common, but interesting, diagnoses that can also be encountered in this devastating infection.
