In our paper “Predation by zooplankton on *Batrachochytrium dendrobatidis*: biological control of the deadly amphibian chytrid fungus?”, we misidentified the species of *Daphnia* that consumes the chytrid fungus *Batrachochytrium dendrobatidis*. We reported the species to be *Daphnia magna*. However, it was pointed out by Joachim Mergeay that the *Daphnia* we used were probably of the *D. pulicaria* species complex, most likely the American lineage of *D. pulex*. Subsequent analysis of our *Daphnia* revealed that the specimens we used were indeed *D. pulex*. These were confirmed by Allison Evans of the Oregon State University Fisheries and Wildlife Department and W. Travis Godkin, an author on a major identification key of North American zooplankton (<http://cfb.unh.edu/cfbkey/html/index.html>).

We give below some references used and of value for identification of *Daphnia* species in case they will be helpful to others.

We thank Joachim Mergeay for originally pointing out our misidentification.
