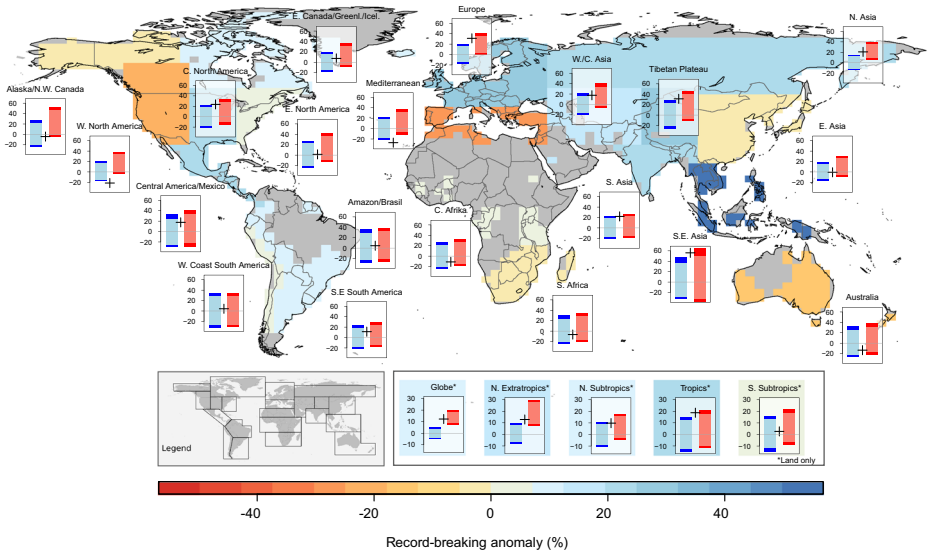

Fig. 4 Annual observed record-breaking anomaly between 1981 and 2010. The magnitude is indicated by different colors at grid cells which contributed to the regional record-breaking anomaly. For each region a separate diagram is shown which includes the observed record-breaking anomaly (+ symbol) and the 90 and 95 % confidence interval estimates from the iid-model (*blue bars*) and the Clausius-Clapeyron model (*red bars*). Lower panels show the same results for the global mean and the four latitudinal belts (same regions as in Figs. 2 and 3)
