*INPA's Botany Graduate Program, Avenida André Araújo, 2936, 69067-375, Manaus – AM, Brazil\*\**

**Erratum to: Photosynthetica**

**DOI: 10.1007/s11099-017-0703-6**

The heading in Table 2 was corrected to  $D_s$  [ $\text{mm}^{-2}$ ] (*see the next page*)

The publisher and authors apologize for these errors and for inconveniences they may have caused.

The online version of the original article can be found under doi: 10.1007/s11099-017-0703-6

Table 2. Stomatal density ( $D_s$ ), stomatal size ( $S_s$ ), fresh leaf thickness ( $T_{leaf}$ ), and specific leaf mass (SLM) in leaves of six Amazonian tree species. Within columns, means followed by the same *small letter* do not differ significantly (Tukey's test at  $p=0.05$ ), and between strata in the same species, means followed by the same *capital letter* are not significant (Tukey's test at  $p=0.05$ ). Each value denotes the mean ( $\pm$  SD) of four plants ( $n = 4$ ). *Bold numerals* indicate significance ( $p \leq 0.05$ ).

Species	$D_s$ [ $\text{mm}^{-2}$ ]		$S_s$ [ $\mu\text{m}$ ]		$T_{leaf}$ [mm]		SLM [ $\text{g m}^{-2}$ ]
