The formula for D_3x given below equation (A9) is wrong for discontinuous g , and equation (A8) is also wrong. An easy way to see this is that for large τ values it does not provide a solution for (A3) (with adapted initial condition) as it should. As a result, the expressions for D_2X , the derivatives for the survival probability and the ψ^i appearing in the characteristic matrix also need correction. Our implementations have been for continuous g and all graphs presented are correct. The mistake is related to a mistake in [Diekmann et al. \(2010\)](#) that appeared around the same time. For the correct formula we refer to a recently submitted corrigendum of [Diekmann et al. \(2010\)](#) as well as to [Breda et al. \(2015\)](#). The latter also contains a derivation of the correct formula.
