Erratum to: Mycol Progress
DOI 10.1007/s11557-013-0939-x

The original version of this article contained two mistakes.

1) Section "Introduction", the first paragraph, should read:

The luminous fungi are capable of emitting light from their fruiting bodies, mycelia, or both (Desjardin et al. 2008; Mori et al. 2011). Until now, 73 species of luminous fungi (Basidiomycota) have been recorded in the world. Among them, 43 species belong to 17 sections of *Mycena* (Desjardin et al. 2008, 2010; Capelari et al. 2011; Aravindakshan et al. 2012).

2) Section "Taxonomy", the third paragraph, should read:

Holotype examined: Shedding Nature Park of Kenting National Park in Taiwan (21°57'25.81"N, 120°49'14.98"E, elev. ca. 202 m), solitary or scattered on decaying woody shells of unknown dicotyledonous plants. Specimens were collected by Y-S Shih on 11 Nov. 2011 and deposited in the National Museum of Nature Science of Republic of China, Taichung, Taiwan (TNM) under the voucher number of F0026642.
