DOI: 10.1134/S1064562414070370

Theorem 3 should read as follows:
Theorem 3. Let $\mu_{k}$ be zeros of multiplicity $s_{k}$ of a function $\psi \in H(D)$ such that $\mu_{k+1}>\mu_{k}$ and $\mu_{k} \in \mathbb{R}_{+}$, and let $\lambda_{k}$ be zeros of a function $\varphi(z)$ lying on a ray perpendicular to the tangent line to the domain $D$ at the limit point of $\mu_{k}$ and such that $\lambda_{k} \nearrow \infty$ and $\left|\arg \lambda_{k}\right|<\frac{\pi}{2}-\varepsilon, \varepsilon>0$.

Then $N_{\varphi}$ is a sequentially sufficient set in the kernel of the operator $M_{\psi}$ in $P_{D}$.
