This study (<https://doi.org/10.1245/s10434-023-14034-w>) investigated the quality of life and values of patients with cancer who underwent CRS ± HIPEC. Despite long-term

impairments, quality of life improved over time and is similar to other surgery survivors. Survivors prioritized longevity and independence over experience and cost.

Data from this study were presented as an oral presentation at the Society of Surgical Oncology International Conference on Surgical Cancer Care, taking place in March 2023 in Boston, MA, and as a podium presentation at SSO Advanced Cancer Therapies in February 2023 in San Diego, CA.
