2 Institute of Informatics, University of Białystok, Sosnowa 64, 15-887 Białystok, Poland

Dear reader,

we present you with the second part of the special issue of the Central European Journal of Computer Science devoted to various areas of informatics. This issue consists of extended and revised versions of selected papers presented at the 12th event of the international scientific conference Informatics'2013, which was held in November 2013 in Spišská Nová Ves, Slovakia and organized by Slovak Society of Applied Cybernetics and Informatics. As with the first part of the special issue, the papers were nominated by the conference chairmen for publishing in CEJCS.

The survey of recent informatics presented in this issue contains interesting research results from various scientific areas, such as graphical user interfaces, intrusion detection, grammar refactoring, software documentation, navigation simulation, and time management in databases.

We would like to express our thanks to all the authors and reviewers for their professional and responsible work. We are confident that inside this issue you can find papers of wide interest.
