The R code for the IAT model in the Appendix should be:

```
model <- lmer(RTD ~ congruent * (wordVsFace + wordType  
+ stimType) + (congruent | participant) + (congruent |  
stimulus), data=dat, verbose=3,  
control=lmerControl(optCtrl = list(maxfun = 10000)))  
  
summary(model)
```

This code is given correctly in the online/HTML version of the article, but not in the PDF version.

The online version of the original article can be found at <http://dx.doi.org/10.3758/s13428-016-0779-0>
