Cas. 6064 CCI, Quito, Ecuador

Summary

Civilizations, highly advanced in science and technology, are bound to possess also a highly refined organizational order. Otherwise they would not have survived. The human analogy supports this proposition. Though still beset by intra-species conflict, our world is already pregnant with tendencies moving it toward a global political and economic order. Contact with a superior extraterrestrial intelligence would therefore serve mankind not only as a thrilling scientific but also as a powerful organizational and cultural stimulus.
