In the paper "Evaluating Structural Symmetry of Weighted Brain Networks via Graph Matching" we made mistakes when describing the results in Fig. 4(c), where the network symmetry of the rs-fMRI network is actually "lower" than that of the network during activation. Thus, we need to replace "higher" with "lower" in the sentence of the abstract "Moreover, by comparing the average functional networks of normal subjects during resting state and activation, we obtain a higher symmetry level in the rs-fMRI network when applying median thresholds to the networks." Additionally, on page 7, we should replace "higher" with "lower" in the two sentences "From Fig. 4(c), higher symmetry level is found in the rs-fMRI network when the threshold is roughly between 0.5 and 0.75, ..." and "In addition, when comparing the average functional networks for normal subjects during resting state and task-related activation, we observe a higher symmetry level in the rs-fMRI network when median thresholds are applied to the networks."
