Abstract. User experience has many dimensions and therefore, it is tricky to evaluate it. When the goal of user experience evaluation is to investigate how people feel about using an interactive system, the traditional usability methods are hardly applicable. In this tutorial, we introduce a set of 78 user experience evaluation methods that we have been collecting from the user experience community 2008-2010. We give both an overview of the different types of methods and examine a selected set of methods in detail.

Keywords: User experience, Evaluation, Assessment, Method.

1 Introduction

High quality user experience (UX) has become a central competitive factor of product development in mature consumer markets. Improving UX of systems requires evaluation, but traditional usability testing methods are not adequate for evaluating UX. The evaluation methods for investigating how users *feel* about the tested system are still largely unknown.

Since 2008, we have been collecting a comprehensive set of UX evaluation methods (UXEM) both from academia and industry. We have collected the methods from workshops [2,3,4], a Special Interest Group session [1], online survey, literature, and existing smaller collections of experiential evaluation methods.

Based on a structured description of each method, we have been able to categorize the methods based on various criteria. Figures 1 and 2 show examples of UXEMs categorized by the time span of UX that is investigated and by the product development phase they can be used in.

In this tutorial, we will share our knowledge on UX evaluation methods by both giving an overview of the different types of UXEMs and by examining a selected set of methods to gain practical understanding of the method.

By the end of this tutorial, participants will know

- the general targets of UX evaluation
- the various kinds of UX evaluation methods available for different purposes
- how to choose the right method for the purpose

Evaluating emotions	Evaluating an episode	Evaluating long-term UX
Observation Facial, body, vocal expressions (e.g. smile, lean back, sigh)	Observation Experience think aloud	Self-reporting Questionnaires, Laddering, iScale, Repertory Grid Technique
Psychophysiological measurements Muscle, pupil, heart, skin reactions detected with sensors	Self-Reporting Experience sampling, AttrakDiff, Interviews, Day Reconstruction	
Self-reporting Verbal: PANAS, AffectGrid Non-verbal: EmotionSlider, EmoCards, PrEmo		

Fig. 1. Examples of UX evaluation methods for studying different periods of experience

Concepting	Non-functional prototype	Functional prototype
Visual design Emotional expressions, reactions	Visual design Emotional expressions, reactions	Lab test Emotional expressions, reactions AttrakDiff
Idea description Expert evaluation, Role play: Perspective-Based Inspection	Interaction Experience think aloud	Field study Experience sampling, Diary, Day Reconstruction Method
		Market feedback Questionnaires, UX Curve / iScale

Fig. 2. Examples of UX evaluation methods for different phases of product development

- the basics of the selected UX methods of different types
- where to find more information on those methods
