×*Neophytum* BROMELIACEAE

U. Eggli

×*Neophytum* M. B. Foster (Bromeliad Soc. Bull. 8: 73, 1958). — **Distr:** Cultivated only.

= *Neoregelia* × *Orthophytum*. Smith & Downs (1979: 2064) mention the hybrid *N. bahiana* × *O. navioides* (now classified as *Sincoraea*), for which the formal name × *Neophytum lymanii* M. B. Foster was published in 1964 (illustrated by Roguenant & al. (2016: 587)). Many more cultivars are offered in the horticultural trade, many of them producing rosettes with numerous gracefully ascending to arching leaves that turn red in strong light.
