Vincent Fleury was invited to write an article in *Origin(s) of Design in Nature* within an interdisciplinary context restricted to philosophy, social and physical sciences, but was not informed that the book would include theology. As a civil servant in a secular administration Vincent Fleury is not allowed to participate in public religious debates, nor to take public positions in relation to faith. His contribution to this book was written as a scientific one (physics), and was not meant as challenging anyone's faith, nor as assessing the likelihood of the existence of a creator.
