In: Appl Microbiol Biotechnol 37:98–103

Due to an unfortunate printing error on page 99, table 1 was missing:

Table 1. Maximum specific growth rates of *Hansenula polymorpha* MH30 on several heterotrophic substrates (all at $5 \text{ g} \cdot \text{l}^{-1}$) and on mixtures of them estimated in carbon-limited chemostat culture

Mixture proportions: 125 mM methanol / 43.3 mM xylose; 54.3 mM glycerol / 33.3 mM xylose; 33.3 mM xylose / 28 mM glucose; 54.3 mM glycerol / 6.95 mM glucose
