CORRECTION

The description of Figure 6 (b) which appeared in my article 'Pictures from meteorological satellites and their interpretation'* is incorrect. Actually, the cloudless region in that figure is in cold air behind a cold front, and is not warm air in a warm sector as the article states.

To correct this error, the attached figures should be substituted for the old Figure 6. In this new figure, picture (b) shows a wave cyclone beginning to occlude over the Pacific Ocean. The warm sector is much more cloudy than the cold air in the old Figure 6 (b); and this cloudy condition seems to be more characteristic of warm sectors.

U.S. Weather Bureau, Washington, D.C.
