Erratum

Visuomotor interactions in responses of neurons in the middle and lateral suprasylvian cortices of the behaving cat

T.C.T. Yin and M. Greenwood

Exp Brain Res (1992) 88:15–32

An unfortunate error occurred in Fig. 5 on p. 19 of the above article: parts C and D were omitted. The correct figure is printed below:

Fig. 5A–D. Saccade-related responses of a cell in the right MS to S trials with upward (**A**) and downward (**B**) saccades or to VS trials in which the test spot was moved downward (**C**) and upward (**D**) at saccadic velocities. The cell responded vigorously to the upward (**A**) and weakly to the downward (**B**) 12° saccades. There was no visual response to a target moving at 500°/s over a 40° range centered at (0°, 0°) in the downward (**C**) or upward (**D**) direction. In **A** and **B** the events are synchronized to W2 at 1000 ms while in **C** and **D** they are synchronized to L2 at 500 ms
