Erratum

Evidence for spatial structure in the cortical input to the monkey lateral geniculate nucleus

R. T. Marrocco and J. W. McClurkin

Experimental Brain Research (1985) 59: 50–56

One page 53, lines 19 and 20, the sentences

Therefore, the cortical input is excitatory within the central 2 deg and inhibitory beyond this. The spatial extent of the inhibitory region was not systematically investigated.

should read:

Therefore, the cortical input is inhibitory within the central 2 deg and excitatory beyond this. The spatial extent of the excitatory region was not systematically investigated.

Announcement

37th Annual Meeting of the Histochemical Society held jointly with the Japanese Histochemical Society, June 9–13, 1986, at the Seven Hills Conference Center, San Francisco State University, San Francisco, California.

There will be four symposia: Histochemistry of oncogenes; Histochemical methods in electrophoretic techniques; Histochemistry of receptors; Secretory enzymes and receptor of mast cells.

In addition there will be four workshops: Lymphocyte histochemistry; DUMAS; New dimensions in electrophoresis; Stereology.

The Vector Young Investigator awards for travel expenses and the Ralph D. Lillie award will be

presented at the meeting. Young investigators and students are encouraged to apply (see August 1985 *Journal of Histochemistry and Cytochemistry*).

Further information, registration and abstract forms can be found in the *Journal of Histochemistry and Cytochemistry*, or by contacting the Program Chairman, Dr. Edward W. Gresik, Department of Anatomy, Mount Sinai School of Medicine, 5th Avenue at 100th Street, NYC, NY 10029, USA
