Biol. Cybern. 55, 333–343 (1987)

It has been brought to our attention that the neuronal network whose description we published in *Biological Cybernetics* **55**, 333–343 (1987) has numerous features in common with a recognition automaton published previously by G.M. Edelman and G.N. Reeke, Jr., in *Proc. Natl. Acad. Sci. USA* **79**, 2091–2095 (1982). We were unaware of Edelman and Reeke's study when we prepared our report.

Prof. Dr. W. Singer
