Erratum

A Model for Generalization and Specification by Single Neurons

Paul W. Munro

Center for Neural Science, Brown University, Providence, RI 02912, USA

Biol. Cybern. **51**, 169–179 (1984)

In Sect. 2.2.2, the paragraph following the theorem (end of p. 171) should be corrected by interchanging the words “positive” and “negative.” The corrected version reads as follows (corrections underscored):

The (constant) sign of $W(x)$ will be shown to determine the feature abstracting property of the neuron. If $W(x)$ is always *negative*, the neuron *generalizes* (a “G-cell”) and if it is *positive* the neuron tunes to a *specific* stimulus (an “S-cell”).
