Mol Gen Genet (1988) 214:97–107

“The DNA sequence given in Fig. 4 is missing a CG pair at position 2844. The corrected sequence at the 3' terminus of the large subunit in Fig. 4 p. 103 is the following:

GCC GAA GGC GCC CCC CTG ACC ACC GTC AAG GTC CGG tagggggatgccatgaagggagtttcogacgaaaggatcaatgcc	2916
Ala Glu Gly Ala Pro Leu Thr Thr Val Lys Val Arg ***	596

Therefore the large subunit has a MW of 65839 and contains only 10 Cys residue.”
