Genetic Control of T-Cell Proliferative Responses to Poly (Glu⁴⁰Ala⁶⁰) and Poly (Glu⁵¹Lys³⁴Tyr¹⁵): Subregion-Specific Inhibition of the Responses with Monoclonal Ia Antibodies

Constantin N. Baxevanis, Dorothee Wernet, Zoltan A. Nagy, Paul H. Maurer, and Jan Klein

Immunogenetics 11: 617–628, 1980

Fig. 2. Inhibition of T-cell proliferative responses to GLT¹⁵ with monoclonal antibodies. The antibodies added to cultures were anti-Ia.m2 (▼), anti-Ia.m7 (◆), anti-Ia.m8 (▲), anti-Ia.m5 (■), anti-Ia.m6 (▣), and anti-H-2.m5 (△). The *solid line* indicates that the relevant antigen is expressed, and the *dashed line* that it is not expressed by the responding strain. In control cultures, proliferation was measured without antibody, in the presence (○) or absence (●) of antigen. *Vertical bars* represent $\pm$ S.D.
