Pflügers Arch (1993) 424:9–14

In the Abstract, lines 18–23 should have read:

“If the water permeability was taken into account, the compliance was probably around 500 m/N. Thus, a mechanism that changes the cell length by 1 μm must generate a static force of at least around 2 nN in an outer hair cell of the organ of Corti.”

The last sentence of the Discussion should read:

“Mechanisms changing the cell length by 1 μm must generate a force of at least 2 nN in the outer hair cell of the organ of Corti.”
