Due to an unfortunate printing error the structure of Table 1 on page 37 of the above article was not correct. The correct table should read as follows:

Table 1. Sensitivity of Na/H exchange activities to inhibition by EIPA

Cell type ("polarity" of activity)	Na/H exchange rate: apical (pH/min)	[EIPA] μ M	Na/H exchange rate: treated (pH/min)	% inhibition with respect to control
OK cells ("apical")	0.078	5	0.033	57.7
OK/NHE1 cells ("apical")	0.066	5	0.025	62.1
OK/NHE1 cells ("basolateral")	0.134	5	0	100
	0.266	1	0.003	99.9
	0.127	0.2	0.013	89.8
	0.176	0.05	0.026	85.2
