Due to an unfortunate error a mistake occurred in the legend to Fig. 6 of the above article. The correct version should read as follows:

Fig. 6A, B. Potentiation by ATP of the noradrenaline-induced $I_{Cl(Ca)}$. K^+ -free conditions; the holding potential was -50 mV. ATP was included in the bathing solution as indicated by the *horizontal bar*. Ionophoretic pulse of noradrenaline (NA): 50 nA for 1 s in A and 600 ms in B
