In the paper intitled “Comparative Magma/Xenolith Relationships in Some Volcanic and Plutonic Rocks From the French Massif Central” (Contrib. Mineral. Petrol. **66**, 401–408, 1978), the amount of “An” shown in Fig. 5 A and B indicates the relative proportions of anorthite in normative plagioclase. By contrast, the relative amount of “An” in Fig. 3 indicates

the proportions of normative anorthite in the whole rocks. The two figures were not directly comparable. The new figures presented here (Fig. 5 A and B) allow one to make a direct comparison with Fig. 3, p. 404 of the former paper. We thank H. De La Roche for pointing out this discrepancy.
