Due to an unfortunate typesetting error, Eq. (13) was incomplete as printed and should have read:

$$T(\pm 30\text{ }^{\circ}\text{C}) = \left(\frac{-4089 + 420(2X_{\text{Mn}}^{\text{ilm}} - 1) - 77(2X_{\text{Mn}}^{\text{gar}} - 1)}{-R \ln K_D - 1.44} \right) - 273.15$$
