Humangenetik 28, 93—96 (1975)

In this lately published case report the familial translocation was not correctly localized as further investigations revealed.

The second translocation chromosome is a chromosome No. 15 and not a No. 13 one. The karyotype of the carrier is 46,XY,t(3;15)(p27;q13). The child therefore shows a partial monosomy 15. (We thank Dr. Niebuhr, Copenhagen, for his advices.)
