Attentional zooming and the global-dominance phenomenon: Effects of level-specific cueing and abrupt visual onset

Thomas H. Stoffer

Institut für Psychologie, Allgemeine und Experimentelle Psychologie, Ludwig-Maximilians-Universität, Leopoldstrasse 13,
D-80802 München, Germany (Also at the Max-Planck-Institut für Psychologische Forschung, München)

Due to an unfortunate error an incomplete version of Fig. 1 was printed. A mistake was also made in the legend. The correct version is printed below.

Fig. 1. Stimuli used in Experiment 1 (top: the two consistent stimuli; middle: the two inconsistent stimuli; bottom, from left to right: global cue, local cue, and neutral cue)
