Erratum

Stimulus Efficacy, Chlorpromazine, and Schizophrenia

Donald E. Clody and Peter L. Carlton

Psychopharmacology **69**, 127–131 (1980)

Because of an oversight in preparing the revised manuscript, proper attribution was omitted from the paper by Clody and Carlton (Psychopharmacology **69**, 127–131, 1980). The omission was a footnote to the quotation from Bleuler that appears on page 130 of the article. This footnote is given below:

Stein and Wise (Science **171**, 1032–1036, 1971) have drawn attention to the possible relation of physiological reinforcement processes and schizophrenic symptoms. The present view differs from theirs in that the modulation of stimulus control by reinforcement contingencies, rather than an overall deficit in reinforcement processes, is postulated as determining a fraction of the symptom spectrum called schizophrenia.
