(Received January 18, 1974)

Formula (18) contains a trivial computational error. The r.h.s., as kindly pointed out to us by Dr. E. Feenberg, is exactly 1. That part of the paper which discusses it (about ten lines) should be disregarded. The remaining part is independent of (18) with the proviso that was after formula (32), that c is exactly $\tilde{c}$. We regret the inconvenience to the reader.
