Erratum: Nuclear Susceptibility of Liquid ^3He - ^4He Solutions Along the Demixing Line*

P. J. Nacher,† I. Shinkoda, P. Schleger, and W. N. Hardy

Department of Physics, University of British Columbia, Vancouver, Canada

A small but potentially significant error was made in the preparation of Fig. 6 of this article. The error is such that the symbols representing the volume susceptibility of the dilute phase m_d (lower data set, solid symbols) should be moved upward by about a symbol size at the lower temperatures, much less above 500 mK.

The best fit parameters a_n of the polynomial expansion for m_d in Table I should be replaced by the values:

$a_0=0.124875$, $a_1=-0.194583$, $a_2=0.855455$, $a_3=-1.02704$, $a_4=0.631035$. No other figure or result is affected by this change.
