Appl. Phys. **14**, 235–254 (1977)

In Table 2, j_n and E_{zp} should read as follows

$$j_n = -i\omega\epsilon_0\epsilon_n(z)V_g(z), \quad (\text{for both } TE \text{ and } TM \text{ modes})$$

$$E_{zp} = -\sum_n \frac{\beta_n}{\omega\epsilon_0\epsilon_u} I_n \exp(i\beta_n x) - \sum_n \frac{v_n(z)}{i\beta_n} \exp(i\beta_n x) \\ (\text{for } TM \text{ modes only}).$$
