the existence of motor fibres in both the sympathetic and parasympathetic division of the autonomic system has been postulated by Garry and Gillespie (1955).

Finally, the finding that the hepta-CCK is a strong stimulant of the rabbit colon and pentagastrin is almost ineffective, provides further evidence that caerulein resembles cholecystokinin-pancreozymin much more than gastrin as to pharmacological activities.

This work was supported by a grant from the C.N.R., Rome.
