Anoxic Survival Time and Metabolic Parameters as Stress Indices in Sea Mussels Exposed to Cadmium or Polychlorinated Biphenyls

[Archives of Environmental Contamination and Toxicology 20, 259–265 (1991)]

In the above paper, the first line of the third paragraph of the Discussion section (p. 262) is incorrect. It should read as follows: The effect of PCBs on the anoxic survival time was discernible after six months of semi-field exposure.

Also, the caption to Figure 5 (p. 263) is incorrect. The corrected version with the figure is shown in the adjacent column.

Fig. 5. Distribution of cytosolic cadmium between HMW (A) and LMW (B) protein fractions, resolved by Sephadex G-75, in mussels exposed to cadmium for 3 and 10 months under semi-field conditions. Mean of two runs $\pm$ SD
