Quinidine Pharmacokinetics in Man: Choice of a Disposition Model and Absolute Bioavailability Studies

**Theodor W. Guentert, Nicholas H. G. Holford, Peter E. Coates,
Robert A. Upton, and Sidney Riegelman**

Received Dec. 5, 1979

In this article (Vol. 7, No. 4, 1979, pp. 315–330) the $V_{d_{area}}$ values reported have been miscalculated because of programming error. The correct $V_{d_{area}}$ can be readily obtained by dividing clearance by β (Table I). The coefficient of variation within individuals taking the repeated quinidine doses (p. 324) was 47%, 25%, 7.3% for $V_{d_{area}}$ and 24%, 30%, 8.7% for clearance.
