ERRATA

Two errors of omission occurred in Tables I and III in the following article: Tompkins, L., Siegel, R. W., Gailey, D. A., and Hall, J. C. (1983). Conditioned courtship in *Drosophila* and its mediation by association of chemical cues. *Behav. Genet.* 13:565-578. The corrected Tables I and III appear below.

Table I. Effects of Visual Cues and the Rejection Behaviors Performed by Fertilized Females on the Subsequent Courtship of Males

Expt.	Pretest conditions ^a	CI $\pm$ SE ^b
I	No stimulus	36 $\pm$ 6
	Mature male	35 $\pm$ 5
	Virgin female	46 $\pm$ 5
	Fertilized female	4 $\pm$ 1
	No stimulus (dark)	47 $\pm$ 1
	Mature male (dark)	33 $\pm$ 6
	Virgin female (dark)	27 $\pm$ 5
	Fertilized female (dark)	11 $\pm$ 4
II	<i>shi^{ts}</i> male	36 $\pm$ 7
	<i>shi^{ts}</i> virgin female	32 $\pm$ 5
	<i>shi^{ts}</i> fertilized female	9 $\pm$ 5
	Virgin female with crushed head	39 $\pm$ 7
	Fertilized female with crushed head	2 $\pm$ 1
III	Female fertilized by Canton-S male	6 $\pm$ 1
	Female fertilized by <i>dg</i> male	34 $\pm$ 5

^a Pretest was in light unless otherwise indicated. Fertilized females copulated with Canton-S males unless otherwise indicated.

^b Mean CI for males tested with virgin females. *N* = 20 for each group in experiments I and II; *N* = 25 for each group in experiment III.

The third line in part II of the above table was originally printed as only "*shi^{ts}*."

Table III. The Effect of Olfactory Cues on the Subsequent Courtship of Males

Expt.	Pretest conditions ^a	CI $\pm$ SE ^b
V	Virgin female + solvent	21 $\pm$ 3
	Virgin female + virgin female extract	25 $\pm$ 4
	Virgin female + fertilized female extract	4 $\pm$ 1
VI	No stimulus	34 $\pm$ 4
	Solvent	31 $\pm$ 5
	Fertilized female extract	40 $\pm$ 8
	<i>shits</i> male + solvent	33 $\pm$ 4
	<i>shits</i> male + fertilized female extract	7 $\pm$ 2
VII	Male extract + fertilized female extract	27 $\pm$ 3
	Fertilized female extract (30 min), then <i>shits</i> male (30 min)	32 $\pm$ 4
	<i>shits</i> male (30 min), then fertilized female extract (30 min)	38 $\pm$ 5

^a Males were pretested for 30 min unless otherwise indicated.

^b Mean CI for males tested with virgin females. $N = 20$ for each group.

The second line in part V of the above table was originally printed as only "Virgin female + virgin female."
