ERRATUM

There is a graphical error in Figure 5, page 142, in the article by Arthur R. Jensen entitled "IQs of Identical Twins Reared Apart" (*Behavior Genetics*, Vol. 1, No. 2, 1970, pp. 133-148). The graph on p. 142 should be replaced by the graph below. The change affects no interpretations or conclusions in the article, but it should be noted that even the most extreme twin-pair difference of 24 IQ points falls on the line describing the normal probability function.

FIGURE 5. The absolute differences in IQ between co-twins plotted against a normal probability scale. The close fit to the straight line shows that environmental effects on the IQ, as represented by the co-twin differences, are normally distributed.
