Eur J Appl Physiol (1994) 68:418–424

The following replaces the time indicated on p 419 under Methods:

The event took place on day 3 of the survival training between 1400 hours and 1500 hours, ...

The following replaces the section on p 422 of Results:

f_c response versus age

The $f_{c,max}$ attained during the parachute jump at night showed a significant correlation ($r = -0.74$; $P = 0.022$) to the age of the S. This relationship was not significant in the guerilla slide (Fig. 4).

Fig. 4. Relationship between $f_{c,max}$ and age of the subjects (for definition see Fig. 2)
