Errata

In the papers “New *Bacillus* bacteriophage species” [Arch. Virol. 135: 333–344] and “Classification of *Acinetobacter* phages” [Arch. Virol. 135: 345–354] by H.-W. Ackermann et al., the respective Tables 1 were accidentally inverted in print: Table 1 on p. 335 (“Surveyed phages”) pertains to paper “Classification of *Acinetobacter* phages”, while Table 1 on p. 346 (“Phages investigated”) is part of paper “New *Bacillus* bacteriophage species”.

In the paper “Effect of the selection pressure with anti-VP7 and anti-VP4 neutralizing monoclonal antibodies on reassortant formation between two human rotaviruses” by N. Kobayashi et al. [Arch. Virol. 135: 383–396], Fig. 2 (p. 388) was reproduced incorrectly and should have been printed as follows:

Fig. 2. RNA profiles of representative reassortants between Wa and HN126 generated by N-MAb selections C and D. RNA segments 1–11 are indicated on the left. Designations of clones are the same as those in Table 3
