Errata

In the paper “Cloning of the gene for the capsid protein of potato leafroll virus” by E. Tacke et al. [Arch Virol 105: 153–163 (1989)] Figs. 4 and 7 were partly confused and should be restored in their integrity:

In the paper "Provirus tagging as an instrument to identify oncogenes and to establish synergism between oncogenes" by A. Berns [Arch Virol 102: 1-18 (1988)] the first two sentences in the last paragraph on p. 4 were incorrect and should be read:

New (putative) oncogenes thus far found by proviral tagging are *int-1*, *int-2*, *int-3*, *int-4*, *pim-1*, *evi-1*, and *spi-1*. So far only *int-1*, *int-2*, and *pim-1* have been characterized in some detail.
